Testimonials

The real value is with Digital Production Control, without it most contractors don't know there are problems until it's too late—no time to recover.

- Timothy J. Wies
 President
 TJ Wies Contracting, Inc.

Digital Production Control increased my profit margin 233%.

- Paul Haines
 Owner
 P.C. Haines Inc.

For a Project Manager, Digital Production Control is helpful, especially for running crews and bids.

- Joe York
 General Superintendent & Project Manager/Estimator
 MCG Commercial

On Center Software is more than just a vendor. They are partners helping us run our business in a more profitable manner.

- Victoria Troake
 CEO
 Troake Group Limited

Since 1988, On Center Software's focus is on the success of our customers. Customer success drives our business; from Development, to Customer Support, to Solution Training. There is a responsibility that comes with being the First Name in Construction Automation—it defines who we are: and **we are one of you.**

- Leonard Buzz
 CEO
 On Center Software

WHEN

Digital Production Control™

On Center Software's Digital Production Control (DPC) is **PATENTED TECHNOLOGY** that has been tying it all together since its introduction in 2008. Contractors turn to On Center Software to solve the most fundamental challenges to a profitable build—labor management and cost control.

Project Managers are responsible for tracking a great deal of information and DPC takes the doubt out of the data. Bottom line profitability doesn't stop at the bid, it ends with the project's completion.

On Center Software's DPC incorporates information from takeoff to bid to build.

If It's Included, It's Tracked!

Additional info on DPC:

YOU

➤ **Accurately Track the Budget** by knowing the estimated labor for each item on the plan. Creating a budget is only the start of being profitable. Align labor for each item on the plan. Report actuals against estimated costs throughout the project life cycle. Establish a continual feedback loop to improve the bidding process.

➤ **Increase Crew Production** through proactive goal setting. Proactively set expectations for each crew. Line out the crew with scheduling sheets by area. Drive more work by stretching the man hours for the list of action items. Record actuals back into the estimating process for the next bid.

➤ **Know Percent Complete** based on the earned value of the budgeted labor. Know the up-to-date project status. Track original estimated quantities of materials and labor hours. Measure installed materials and corresponding completed labor hours. Analyze the data against the earned value of the budgeted labor, including actual payroll.

➤ **Lower Risks** associated with project overruns and schedule delays. Identify and respond immediately if a project slips. Stop project overruns by looking at actual labor worked and materials implemented. Immediately understand the impact of scheduling delays. Create a closed loop process from field to office to keep the project on track.

BUILD

➤ **Manage the Project** with a tablet onsite, in the field. Implement Windows-based tablet technology. Share information immediately between the Foreman and the Project Manager. Communicate addendum changes and work day status instantly.

➤ **Document, Argue, & Win** project claims and job status discrepancies. Win challenges and cases with project management best practices. Clarify project scope and resources with a thorough automated takeoff. Accurately monitor time and money with estimation and accounting systems. Document the project from the very beginning and track the measured mile.

➤ **Improve Bidding Accuracy** with continuous feedback of actual achieved production. Implement best practices of labor tracking, percent complete, and measured mile. Drive value back to the project with improved accuracy, lowered risks, and winning claims.

➤ **Complete Project Life Cycle Automation** by bringing OST, QB, and DPC into the job. Project management begins with a thorough and complete takeoff. Annotate plans, create Requests for Information (RFI), and communicate from the office or the field.

PROFIT

I was using the product for about 6 months with minimal training. I decided to hop on a plane and come here from Australia. It was the best training. I really recommend it to anyone.

- Craig Jarvie, Founding Director, Consolidated Ceiling Services PTY LTD

Curriculum options for introductory, intermediate, and advanced skills:

- **Self-Guided Training** with Videos & Self-Help Guides
- **Orientation Webinars** using Digital Online Access
- **One-on-One Training** covering Personalized, Specific Content
- **Instructor-Led Training** with Multi-Company Trainees
- **Customized Classroom Training** for One or More People From the Same Company

Training options: www.oncenter.com/training

Support

I support nearly 600 software titles (packages) and I can say On Center has the best support of all of them...whether it be the web chat or telephone, I've never had a bad experience.

- Steve Battles, C&S Design Build

Technical support services:

- **24-Hour Support** every Business Day, Worldwide
- **Local Toll Free Numbers** for Australia, Canada, New Zealand, South Africa, United Kingdom, & United States
- **Instant Access** via the Online Live Chat, Support Online Forms, Remote Assistance
- **Self-Service Options** including Online Frequently Asked Questions, Help Tab Within the Products
